

# drop arm awning

## drop arm awning system

with compression springs

The Drop Arm Awning gives you the protection of a fixed awning, however, the compressed spring arms afford you the flexibility to retract the awning whenever you wish, to the degree that you choose. This Awning features a roller tube, front bar and compressed spring arms. The most outstanding feature of this awning system is that you decide the level of shade and privacy you require, and are designed to withstand high winds and adverse weather. Motorisation recommended for 2nd level installation.

Motorisation: When motorised we use Windoware motors (includes wind sensor).

### TUBES

#### 78mm Keyway Tube

78mm tube prevents fabric sagging and provides extra strength.

3.52m STEEL - 1mm wall thick

02548

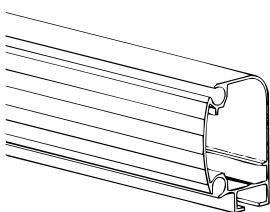

4.70m STEEL - 1mm wall thick

02549

5.88m STEEL - 1.2mm wall thick

02550

GALVANISED  
UNIT: Per Length

#### Front Bar

Heavy duty aluminium front bar design provides minimal flex. Fabric comes over the top and prevents spline pulling out and water trapping in spline grooves.

3.52m EXTRUSION
